

WHAT IS CLAIMED IS:

1. A method of preparing a pyrrolotriazin-4-one compound represented by the following general formula (4), the method comprising:

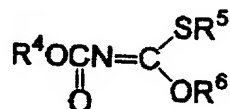

an addition step of reacting an aminopyrrole derivative represented by the following general formula (1) with a reactant represented by the following general formula (2) for forming an adduct represented by the following general formula (3); and

a cyclization step of cyclizing the adduct represented by the following general formula (3) for forming the pyrrolotriazin-4-one represented by the following general formula (4),

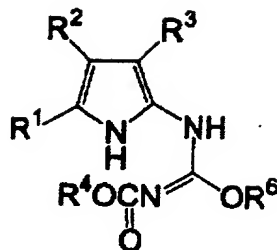

General formula (1)

General formula (2)

General formula (3)

General formula (4)

wherein, in the general formulas,  $R^1$  represents a hydrogen atom, an alkyl group, an aryl group, or a group capable of withdrawing;  $R^2$  and  $R^3$  each independently represents a hydrogen atom, an alkyl group, an aryl group, a cyano group, a substituted sulfonyl group, a substituted carbonyl group, or a halogen atom;  $R^4$  represents a substituted or non-substituted alkyl group, or a substituted or non-substituted aryl group;  $R^5$  represents a substituted or non-substituted alkyl group, a substituted or non-substituted aryl group, or a substituted or non-substituted heterocyclic group; and  $R^6$  represents a substituted or non-substituted alkyl group having at least 3 carbon atoms, or a substituted or non-substituted aryl group.

2. The method of preparing a pyrrolotriazin-4-one

according to claim 1, wherein at least one of a first acid , a salt of the first acid, and a base is present in a reaction system of the addition step.

3. The method of preparing a pyrrolotriazin-4-one according to claim 2, wherein the first acid is at least one acid selected from the group consisting of alkylsulfonic acid, arylsulfonic acid, alkylcarboxylic acid and Lewis acid.

4. The method of preparing a pyrrolotriazin-4-one according to claim 2, wherein the salt of the first acid is at least one salt of the acid selected from the group consisting of alkylsulfonic acid, arylsulfonic acid, alkylcarboxylic acid and Lewis acid.

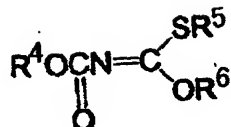

5. The method of preparing a pyrrolotriazin-4-one according to claim 1, wherein at least one of a second acid, a salt of the second acid, and a base is present in a reaction system of the cyclization step.

6. The method of preparing a pyrrolotriazin-4-one according to claim 2, wherein at least one of a second acid, a salt of the second acid, and a base is present in a reaction system of the cyclization step.

7. The method of preparing a pyrrolotriazin-4-one according to claim 3, wherein at least one of a second acid, a salt of the second acid, and a base is present in a reaction system of the cyclization step.

8. An isothiocyanatoformic acid ester derivative represented by the following general formula (2):

General formula (2)

in which: R<sup>4</sup> represents a substituted or non-substituted alkyl group, or a substituted or non-substituted aryl group; R<sup>5</sup> represents a substituted or non-substituted alkyl group, a substituted or non-substituted aryl group, or a substituted or non-substituted heterocyclic group; and R<sup>6</sup> represents a substituted or non-substituted alkyl group having at least 3 carbon atoms, or a substituted or non-substituted aryl group.

9. A method of preparing the isothiocyanatoformic acid ester derivative according to claim 8, the method comprising the steps of:

adding a chloroformic acid derivative represented by the following general formula (7) to an isothiocyanic acid salt represented by the following general formula (5) and a hydroxy derivative represented by the following general formula (6) for preparing an intermediate represented by the following general formula (8); and

preparing the isothiocyanatoformic acid ester derivative from the intermediate:

General formula (5)

General formula (6)

General formula (7)

General formula (8)

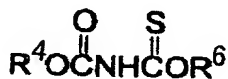

wherein, in the general formula (5), Z represents a sodium atom or a potassium atom.

10. A method of preparing [the isothiocyanatoformic acid ester derivative according to claim 8], the method comprising the steps of:

preparing a first intermediate represented by the following general formula (8);

preparing a second intermediate represented by the following general formula (10) from the first intermediate and a compound represented by the following general formula (9); and

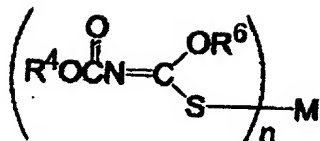

preparing the isothiocyanatoformic acid ester derivative from the second intermediate:

General formula (8)

General formula (9)

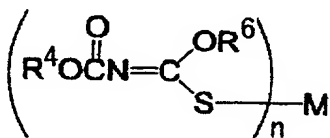

General formula (10)

wherein, in the general formulas (9) and (10), M represents an alkali metal atom, an alkali earth metal atom, an aluminum atom or a magnesium atom.

11. A method of preparing the isothiocyanatoformic acid ester derivative according to claim 8, the method comprising the steps of:

preparing an intermediate represented by the following general formula (10); and

reacting the intermediate with an alkylating agent represented by one of the following general formula (11) and the following general formula (12) for preparing the isothiocyanatoformic acid ester derivative:

General formula (10)

General formula (11)

General formula (12)

wherein, in the general formula (10), M represents an alkali metal atom, an alkali earth metal atom, an aluminum atom or a magnesium atom, and, in the general formula (11), X represents a halogen atom or  $\text{SO}_3\text{Ar}$ , and Ar represents a substituted or non-substituted aryl group.

12. A method of preparing the isothiocyanatoformic acid ester derivative according to claim 8, the method comprising the steps of:

adding a chloroformic acid derivative represented by the following general formula (7) to an isothiocyanic acid salt represented by the following general formula (5) and a hydroxy derivative represented by the following general formula (6) for preparing a first intermediate represented by the following general formula (8);

preparing a second intermediate represented by the following general formula (10) from the first intermediate and a compound represented by the following general formula (9); and

preparing the isothiocyanatoformic acid ester derivative from the second intermediate:

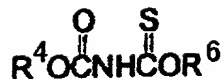

General formula (5)

General formula (6)

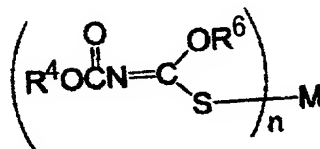

General formula (7)

General formula (8)

General formula (9)

General formula (10)

wherein, in the general formula (5), Z represents a sodium atom or a potassium atom, and, in the general formulas (9) and (10), M represents an alkali metal atom, an alkali earth metal atom, an aluminum atom or a magnesium atom.

13. A method of preparing the isothiocyanatoformic acid ester derivative according to claim 8, the method comprising the steps of:

preparing a first intermediate represented by the following general formula (8);

preparing a second intermediate represented by the following general formula (10) from the first intermediate and a compound represented by the following general formula (9); and

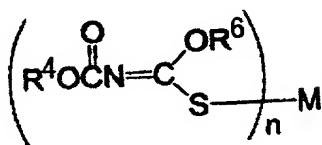

reacting the second intermediate with an alkylating agent represented by one of the following general formula (11) and the following general formula (12) for preparing the isothiocyanatoformic acid ester derivative:

General formula (8)

General formula (9)

General formula (10)

General formula (11)

General formula (12)

wherein, in the general formulas (9) and (10), M represents an alkali metal atom, an alkali earth metal atom, an aluminum atom or a magnesium atom, and, in the general formula (11), X represents a halogen atom or  $SO_3Ar$ , and Ar represents a substituted or non-substituted aryl group.

14. A method of preparing the isothiocyanatoformic acid ester derivative according to claim 8, the method comprising the steps of:

adding a chloroformic acid derivative represented by the following general formula (7) to an isothiocyanic acid salt represented by the following general formula (5) and a hydroxy derivative represented by the following general formula (6) for preparing a first intermediate represented by the following general formula (8);

preparing a second intermediate represented by the following general formula (10) from the first intermediate; and

reacting the second intermediate with an alkylating agent represented by one of the following general formula (11) and the following general formula (12) for preparing the isothiocyanatoformic acid ester derivative:

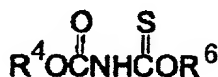

General formula (5)

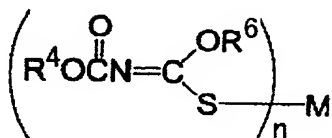

General formula (6)

General formula (7)

General formula (8)

General formula (10)

General formula (11)

General formula (12)

wherein, in the general formula (5), Z represents a sodium atom or a potassium atom, in the general formula (10), M represents an alkali metal atom, an alkali earth metal atom, an aluminum atom or a magnesium atom, and, in the general formula

(11), X represents a halogen atom or  $\text{SO}_3\text{Ar}$ , and Ar represents a substituted or non-substituted aryl group.

15. A method of preparing the isothiocyanatoformic acid ester derivative according to claim 8, the method comprising the steps of:

adding a chloroformic acid derivative represented by the following general formula (7) to an isothiocyanic acid salt represented by the following general formula (5) and a hydroxy derivative represented by the following general formula (6) for preparing a first intermediate represented by the following general formula (8);

preparing a second intermediate represented by the following general formula (10) from the first intermediate and a compound represented by the following general formula (9); and

reacting the second intermediate with an alkylating agent represented by one of the following general formula (11) and the following general formula (12) for preparing the isothiocyanatoformic acid ester derivative:

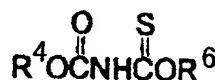

General formula (5)

General formula (6)

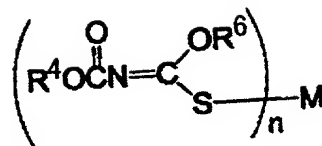

General formula (7)

General formula (8)

General formula (9)

General formula (10)

General formula (11)

General formula (12)

wherein, in the general formula (5), Z represents a sodium atom or a potassium atom, in the general formulas (9) and (10), M represents an alkali metal atom, an alkali earth metal atom, an aluminum atom or a magnesium atom, and, in the general formula (11), X represents a halogen atom or  $SO_3Ar$ , and Ar represents a substituted or non-substituted aryl group.
